EDUCATION

William Paterson University — **Wayne, NJ**
B.S. in Information Technology / GPA: 3.724 — **Expected Dec 2026**
Montgomery College — **Rockville, MD**
Associate of Arts in Information Systems and Sciences / GPA: 3.63 — **May 2025**
Ganpat University — **Mehsana, India**
Diploma in Computer Engineering / CGPA: 8.53/10 — **July 2022**

TECHNICAL SKILLS

Cloud & Infrastructure: AWS EC2, AWS S3, Terraform, AWS CLI, Security Groups, S3 bucket policies, Apache user data
Programming: Python, JavaScript, Java, C++, C, HTML, Node.js, Express, React, Vite
AI & Data: LLM APIs, prompt engineering, RAG, TF-IDF retrieval, cosine similarity, Gemini, Claude
Security & Monitoring: Authentication-log monitoring, threshold-based detection, suspicious IP tracking, Wireshark, Nmap, Kali Linux
Developer Tools: Git, GitHub, VS Code, PowerShell, Render, Vercel, Linux, Windows

PROJECTS

ThreatSim - AI Cybersecurity Training Platform | **React, Node.js, Express, LLM APIs** Jan 2026 - May 2026

- Developed ThreatSim as the project that earned Second Place at the 2026 Applied LLM Hackathon hosted by William Paterson University.
- Built rubric-aligned LLM response scoring with JSON schema validation for consistent cybersecurity interrogation simulations.
- Tested Gemini and Claude outputs across 4 interrogation scenarios and documented prompt tests, scoring criteria, and output schema.
- Supported React/Vite frontend and Node.js/Express backend deployment using Vercel and Render for live demo readiness.

Authentication Log Monitoring & Alert System (SOC Simulation) | **Python, Regex, CSV, JSON**
Dec 2025 - Present

- Processed 1,000+ authentication log entries to detect repeated failed login attempts using configurable threshold-based alert logic.
- Generated timestamped alerts plus CSV/JSON threat artifacts for suspicious IP tracking and simulated SOC triage workflows.
- Designed continuous monitoring workflow and planned AI-agent layer for cloud log analysis and alert prioritization.

AWS Infrastructure Deployment with Terraform | **EC2 Web Server** | **S3 Static Website**
May 2026

- Provisioned EC2 web server and S3 static website infrastructure using Terraform Infrastructure as Code and AWS CLI.
- Configured HTTP/SSH security groups, Apache installation through user data, S3 website hosting, and Terraform outputs.
- Documented terraform init, fmt, validate, plan, apply, and output workflow with live endpoints and deployment screenshots.

Gym Contract Auditor (RAG) | **Python, TF-IDF, Gemini API** **Oct 2025 - Nov 2025**

- Implemented TF-IDF retrieval and cosine similarity ranking across 50+ document segments for clause-level contract question answering.
- Integrated Gemini API with confidence-threshold fallback logic to reduce unsupported answers outside retrieved source context.

EXPERIENCE

Residence Hall Package Tracking Support **Sept 2025 - Jan 2026**
William Paterson University - Wayne, NJ

- Supported Excel-based package tracking workflow for 1,000+ student deliveries per semester across multiple residence halls.
- Processed 40-60 package lookup requests daily while coordinating with housing staff and student residents.
